CONFIDENTIAL INTERNAL PROJECT DOCUMENT

1. Project Overview

Loopify Owner Assistant is a business-owner-focused reminder, follow-up, calendar and personal CRM application. The objective is to ensure meetings, calls, commitments, tasks, payments, follow-ups and business notes are captured and not forgotten. The owner can type or speak naturally and the system should convert the input into a structured activity, schedule a reminder, optionally synchronize it with Google Calendar and track it until completion.

2. Core Business Objective

Capture → Understand → Schedule → Remind → Synchronize → Follow Up → Track.

3. Primary Users

User	Access / Responsibility
Business Owner	Full access to tasks, calendar, contacts, projects, notes, reminders, reports and settings.
Administrator	System configuration, users, integrations, notification settings and audit controls if enabled.
Future Team Users	Optional future capability for delegated tasks and team activities.

4. Quick Add / Smart Capture

The Quick Add feature is the core interaction. The owner should be able to enter a sentence without completing a complex form. Examples:

- “Tomorrow 11 AM – Call Kiran Baug regarding CNC project.”
- “Meeting with Grace Medical Services on Monday at 4 PM.”
- “Follow up with Dhiyanshi regarding quotation.”
- “Remind me every Monday to review project status.”

The system should identify activity type, person/company, date, time, purpose, priority and reminder where sufficient information exists. The owner must be able to review/edit before saving.

5. Activity Types

Category	Activities
Communication	Call, WhatsApp, Email, Video Call, Follow-up
Meetings	Client, Internal, Vendor, Employee, Online Meeting, Site Visit
Business Tasks	Quotation, Invoice, Proposal, Project Review, Approval, Development Review
Follow-ups	Customer, Payment, Quotation, Project, Lead, Vendor
Personal	Personal Reminder, Important Date, Birthday, Anniversary, Travel, Appointment

6. Google Calendar Integration

- Securely connect the owner's Google account.
- Create calendar events from meetings/tasks when synchronization is selected.
- Sync title, date, time, description, contact, purpose and notes.
- Support event update/cancellation where authorized.
- Show synchronization status and errors.

7. Reminder & Notification Engine

Reminder	Requirement
Predefined	5 min, 15 min, 30 min, 1 hour, 2 hours, 1 day before.
Custom	Owner-defined reminder time.
Recurring	Daily, weekly, monthly and custom recurrence.
Overdue	Alert for incomplete overdue activities.
Daily Briefing	Morning summary of overdue, today and upcoming activities.
Channels	Web notification initially; email/push/WhatsApp later.

8. Daily Owner Dashboard

Section	Information
Overdue	Pending activities past due.
Today	Meetings, calls, tasks and follow-ups.
Upcoming	Next days/weeks.
Priority	Critical/high activities.
Payments	Pending payment follow-ups where enabled.
Projects	Important project actions.
Next Activity	Next scheduled action with time/countdown.

9. Daily Business Briefing

Generate a concise daily briefing such as: "Good Morning. You have 7 activities today: 2 overdue, 4 scheduled today and 1 upcoming follow-up. Your next activity is a 10:30 AM payment follow-up."

10. Contacts / Personal CRM

Feature	Requirement
Contact	Name, company, mobile, email and basic details.
Relationship	Customer, vendor, lead, partner, employee or other.
Timeline	Calls, meetings, notes, follow-ups and activities.
Next Follow-up	Next planned contact date/time.
Notes	Business context and discussion notes.
Projects	Associate relevant projects.
Payments	Optional payment follow-up information.

11. Relationship Timeline

Each contact/company should show a chronological history of meetings, calls, quotations, discussions and follow-ups so the owner can understand the relationship quickly.

12. Follow-up Automation

- Ask whether a follow-up is required after completing an activity.
- Suggest tomorrow, 3 days, 7 days or custom date.
- Automatically create the next reminder when selected.
- Allow “No follow-up”.
- Maintain follow-up chains/history.

13. Recurring Activities

Support daily, weekly, monthly, selected weekdays, every X days/weeks/months and custom recurrence rules. Examples include weekly project review, monthly business report, payment review and recurring customer follow-up.

14. Payment Reminder Module

Allow customer, invoice/reference, amount, due date and status to be recorded for payment follow-up. Generate reminders before/after due date. Full accounting is outside initial scope unless separately approved.

15. Project Reminder Module

Projects should contain tasks, deadlines, contacts and follow-ups, with a simple project-health view and pending actions.

16. Business Notes

- Create quick notes.
- Tag notes to contact/company/project.
- Search notes.
- Convert note into task/reminder.
- Add date/time.
- Optionally summarize meeting notes with AI.

17. Voice Input

Support voice capture so the owner can speak a reminder. Voice is converted to text and, when AI is enabled, into a structured activity.

18. AI Business Assistant

AI Capability	Requirement
Natural Language	Convert conversational instructions into tasks/reminders.
Classification	Identify call, meeting, task, follow-up, note or reminder.
Date/Time	Understand tomorrow, next Friday, Monday at 4 PM, etc.
Follow-up Suggestion	Suggest next action after meetings/calls.
Daily Summary	Generate daily business briefing.
Meeting Notes	Summarize notes and identify actions.
Smart Suggestions	Identify activities that may require follow-up.

19. Priority Management

Priority	Usage
Critical	Time-sensitive/business-critical.
High	Important customer/payment/project activity.
Medium	Normal business activity.
Low	Non-urgent reminder or idea.

20. Calendar Views

Provide Day, Week, Month and Agenda views with categories for Meetings, Tasks, Follow-ups, Critical activities and Personal reminders.

21. Notification Center

Central area for upcoming reminders, overdue activities, calendar sync issues, follow-up suggestions and important system notifications.

22. Search

Global search should find a person/company and show contacts, meetings, calls, notes, follow-ups, projects and payment reminders where available.

23. Mobile-First UX

- Responsive desktop/tablet/mobile web application.
- Fast Quick Add button.
- Voice input button.
- Calendar shortcut.
- Reminder center.
- One-tap completion and snooze.
- Minimal forms for common actions.

24. Suggested Navigation

Dashboard → Quick Add → Tasks → Calendar → Meetings → Calls → Follow-ups → Contacts/CRM → Projects → Payments → Notes → Recurring Tasks → Notifications → Reports → Settings

25. Administration & Settings

Area	Requirement
Users & Roles	Owner/admin/future team access.
Integrations	Google Calendar and future communication integrations.
Notifications	Default reminder settings and channels.
Categories	Activity, contact and priority categories.
Security	Authentication, sessions, access control and audit controls.
Backup	Backup strategy according to deployment environment.

26. Reports

- Today's activity report
- Overdue activity report
- Completed activity report
- Upcoming meetings report
- Follow-up report
- Contact activity timeline
- Pending payment follow-up report
- Project pending-action report
- Activity performance summary

27. Technical Requirements

Component	Recommended Direction
Frontend	React / Next.js responsive web application
Backend	Node.js API/service layer
Database	PostgreSQL
Authentication	Secure login with optional Google OAuth
Calendar	Google Calendar API
AI	AI service for natural-language understanding and summaries
Voice	Browser/device speech-to-text or approved service
Notifications	Web initially; push/email/WhatsApp later
Deployment	VPS/cloud according to Loopify standards

28. Security Requirements

- Secure authentication and password handling.
- Role-based access control.
- HTTPS.
- Secure OAuth token handling.
- Session expiration/logout.

- Audit logging for important administrative actions.
- Input validation and common web-security protections.
- Regular backup strategy appropriate to hosting environment.

29. MVP – Phase 1

Priority	Feature
P0	Owner Login & Dashboard
P0	Quick Add / Smart Reminder
P0	Tasks, Meetings, Calls and Follow-ups
P0	Calendar
P0	Google Calendar Integration
P0	Notifications
P0	Recurring Reminders
P0	Contacts / Basic CRM
P0	Daily Business Briefing
P1	Notes
P1	Basic Reports

30. Phase 2 – AI & Automation

- AI natural-language assistant.
- Voice-to-task.
- AI meeting-note summarization.
- Automatic action-item extraction.
- Smart follow-up suggestions.
- Payment reminders.
- Email integration.
- WhatsApp notification integration.

31. Phase 3 – Advanced Business Assistant

- Mobile application.
- Team delegation.
- Advanced business analytics.
- Automated customer follow-up.
- Project-management integration.
- Financial dashboard.
- Advanced AI recommendations.

32. Key Business Rule

“If the owner thinks of something, the system should make sure it doesn’t get forgotten.”

Preferred experience: Type / Speak → AI understands → Activity created → Calendar synchronized → Reminder sent → Activity completed → Next follow-up suggested.

33. Project Deliverables

- Responsive Owner Assistant web application.
- Database and backend services.
- Owner dashboard.
- Reminder/notification engine.
- Google Calendar integration.
- Contacts/basic CRM.
- Task/meeting/call/follow-up management.
- Recurring activities.
- Daily briefing.
- Initial deployment/configuration.
- Basic documentation.

34. Future Product Opportunity

The architecture should allow the internal Loopify Owner Assistant to evolve into a multi-tenant SaaS product for business owners, with organizations, subscriptions, team users, billing and tenant-level data isolation.

35. Acceptance & Scope Control

This document defines the proposed product requirements. Final UI designs, field-level specifications, API details, integrations, notification providers, AI provider, hosting architecture and delivery schedule should be approved before development. Features not included in the approved final scope will be treated as change requests.

36. Conclusion

Loopify Owner Assistant is intended to function as a practical digital business memory for the owner: one place to capture commitments, schedule activities, synchronize meetings, receive reminders, maintain relationships and ensure follow-ups are not missed.
