LOOPIFY OWNER ASSISTANT

Owner testing guide - current MVP features

This guide describes what is working now and the order to test it.

WHAT THE TELEGRAM BOT CAN DO

1. Add activities: Send /add followed by a description, for example:
   /add Call John tomorrow at 10am
   You can also send a normal activity sentence without a command.
2. View work: /today, /upcoming, /overdue, and /briefing.
3. Confirm activities: Use the Complete or Cancel buttons on an activity.
4. Reminders: Scheduled activities can produce Telegram reminders.
5. Contacts: Use /contacts to view saved contacts.
6. Dashboard: Send /start, then tap Open dashboard.
   This is the recommended dashboard flow for the owner.
7. Help: /help shows the available bot commands.

WHAT THE DASHBOARD CAN DO

1. Quick Add activities with type, priority, and scheduled time.
2. View, complete, edit, and delete activities.
3. Manage contacts with name, company, and relationship.
4. Create, search, and delete business notes.
5. View basic reports: totals, pending, completed, completion rate,
   today, overdue, upcoming meetings, and follow-ups.
6. Connect Google Calendar, sync events, and create calendar events
   from scheduled Loopify activities.
7. Linked calendar events are updated or removed when the activity changes.

OWNER TESTING STEPS

1. Open the Loopify bot and send /start.
2. Tap Open dashboard. Wait briefly if the free hosting service is waking up.
3. Add one task and one scheduled meeting from Quick Add.
4. Return to Telegram and test /today, /upcoming, and /briefing.
5. Complete one activity and cancel another using the buttons.
6. Add a contact and confirm it appears in Contacts.
7. Add a business note, search for it, and delete it if needed.
8. Open Reports and confirm the counts match the activities created.
9. Connect Google Calendar, approve Google access, and tap Sync now.
10. Add one scheduled activity to Google Calendar and verify it there.
11. Change or delete the linked activity and verify the calendar event changes.
12. Wait for a scheduled reminder and confirm it arrives in Telegram.

IMPORTANT TESTING NOTES

- The owner should use the same Telegram account throughout testing.
- The Mini App requires a public HTTPS deployment; localhost is not enough.
- Google Calendar requires the Google account to be approved as a test user.
- Free hosting may sleep when unused, so the first request can be slow.
- PostgreSQL is the permanent source of saved activities, contacts, and notes.
- This is an MVP testing deployment, not yet a guaranteed production service.

CURRENT MVP STATUS

Working: Telegram bot, activities, reminders, contacts, Mini App dashboard, Google Calendar connection and sync, notes, reports, and PostgreSQL storage.

Still required before permanent production: stable hosting, backups, monitoring, and rotation of the credentials that were used during local development.
